Is getting to meaningful information like trying to get through a maze?

Who we are

Virtual Health Management is a premier provider of information, systems and expertise for employee benefits administrators. We have a proven track record for providing superior service and producing results.

Virtual Health Management will help you through the maze of systems and data files to help you and your client make sense of it all.

We get the right information to the right people at the right time so they can take the appropriate action

What we do

At Virtual Health Management, we use cutting edge technology to gather, normalize, store and analyze data. We do this in three areas: employee benefit eligibility control, claims history and trending analysis, and money recovery through subrogation and related recoveries. Through these areas we are able to vastly improve the efficiency of the movement of data to and from the client, providers and TPA.

We will take your data through the maze of benefits administration systems, languages and formats to reach the end results, information in a form you can use when you need it.

Understanding and sharing information is what we do best

Simplified Employee Benefits Eligibility Control

TrendHealth-ES simplifies client control over all employee benefit eligibility. It is a user-friendly web based management tool which implements the latest technology and our exclusive "one and done" approach. With this unique HIPAA compliant program, the eligibility data is normalized to work within your system.

The data is handled only once providing all vendors (including dental, prescriptions, medical, long term and short term disability, vision and 401-K providers) notice of the eligibility changes or updates in their required data format.
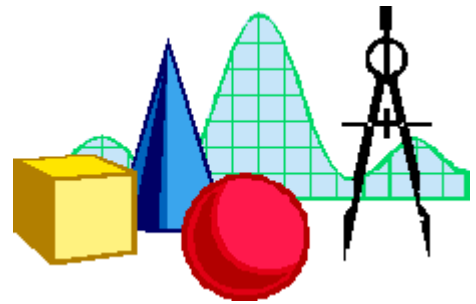

Both you and your client save significant administrative and technical support time. Imagine not having to worry about receipt and transmission of eligibility data. This program can be added at the front end of your system with no change to your present system or data.

Easy Access to Claims History and Trending Analysis

TrendHealth-DX gives you the power to analyze claims history and process. VHM has the capability to integrate multiple vendor data sets and drill down to produce in-depth reports for you and your clients dealing with providers, employees, procedures, prescriptions, locations, departments or any other data set you can imagine.

Our experienced staff can provide consulting services for you and your clients to examine potential savings areas, comparison with other plans, plan trending and relevant data needs for effective benefits administration. With this advanced capability to produce standard and ad-hoc reports you will be better able to customize the plan for your client's needs.

Armed with the information about your client's plan, you will be better able to serve and anticipate the needs of the market. Tremendous savings can be realized by applying this knowledge to the ever-changing marketplace.

Improved Money recovery for you and your clients

TrendHealth-Stars utilizes your claims information to identify potential subrogation and recovery opportunities. This industry leading and technologically advanced system provides you with greater numbers of recovery opportunities and the ability to pursue lower dollar recovery amounts. We do this utilizing an automated system that reduces staff time and costs. We provide you and your clients with complete on-line reporting.

The recovery from subrogation, double payments, and other such areas are the only money making area in the benefits field. All other areas deal with cost reduction or limitations on benefits. This dramatic impact on the bottom line deserves the highest attention.

VHM will provide you with more recovery opportunities and more total dollars recovered. You owe it to your organization and to your clients to have the very best recovery efforts employed on your behalf. We work on a contingent fee for this service with no cost to you or your clients.

Benefits of Working with Virtual Health Management

- Reduced staff time for you and your clients
- Greater control of information
- Increased subrogation and related recoveries
- Cost effective and improved benefit design
- A partner who will work with you for the benefit of your client

VHM is ready and able to assist you in improving your eligibility enrollment, claims analysis and subrogation recovery
